

Product Profitability

Product Profitability Analysis

Not all products are created equal. Explore which categories and products deliver the highest margins, which are underpriced relative to their cost, and where pricing power is strongest across all 50 SKUs and 5 categories.

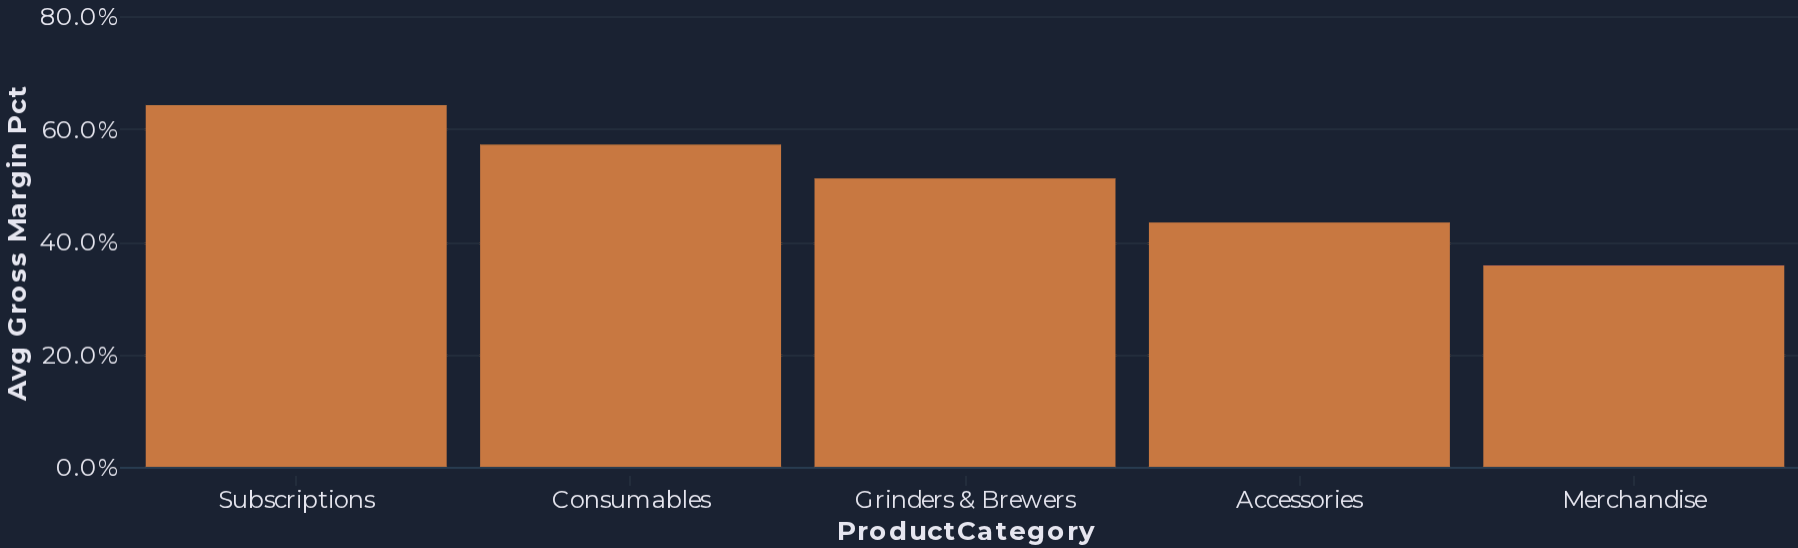

Revenue by Category

Which categories drive top-line volume? Revenue from highest to lowest category.

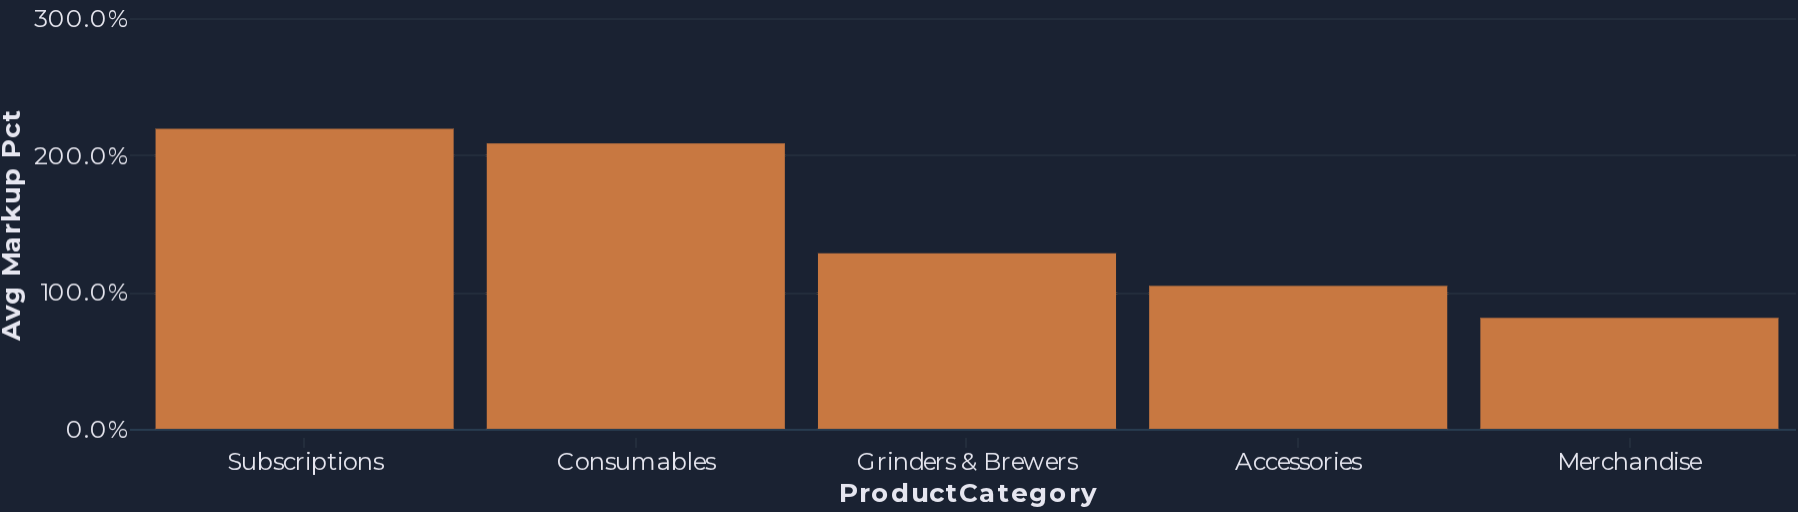

Avg Gross Margin % by Category

Which categories protect profitability best? Higher margin = more pricing power per dollar of cost.

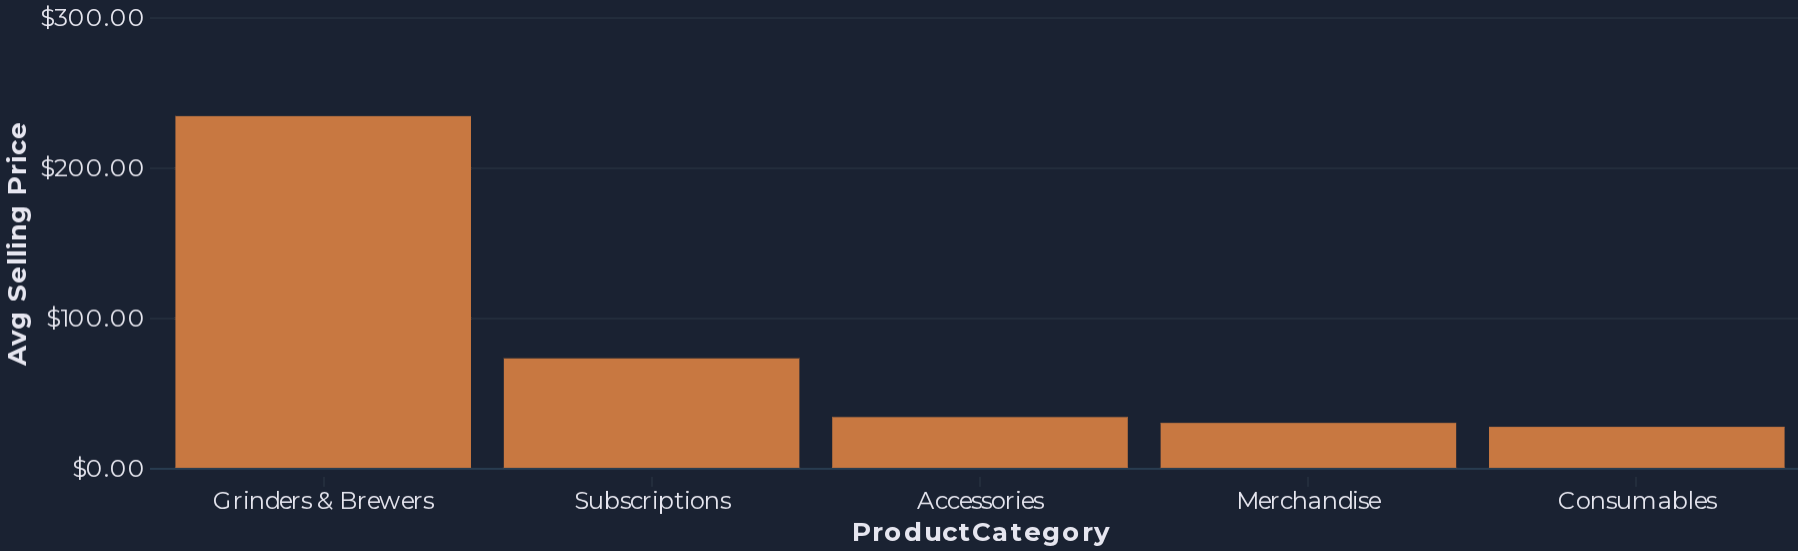

Avg Markup % by Category

Markup % is the pricing power signal: how far above base cost are we charging? Categories with high markup have strong pricing leverage.

Avg Selling Price by Category

The actual price customers paid per unit on average. Compare this to list price to detect discounting patterns.

Gross Margin % by Category Over Time

Has each category's margin improved, declined, or held steady? Diverging lines may reveal pricing strategy inconsistencies across the catalog.
